

Pescanova. |

Line professionals play a key role in companies, as they are the ones who work with the final product reaching customers and consumers. It is essential, therefore, to empower these teams through advanced technological tools that provide them with access to the company's knowledge from any location.

This requires providing them with innovative technologies that facilitate remote interconnection and provide them with information in a visual form, but at the same time, do not interfere with the tasks of these workers. In response to this challenge, the **Nueva Pescanova Group has launched a Mixed Reality pilot project at its plant in Arteixo (A Coruña).**

 Microsoft
HoloLens 2

This initiative is supported by two pillars: Microsoft HoloLens 2 and Dynamics 365 Remote Assist. The holographic glasses Microsoft HoloLens 2 offer, through 3-D images, the visual support they required to resolve, in a much more agile and efficient way, any work order that needs to be carried out in work to be carried out in off-site locations.

Dynamics 365 Remote Assist complements this, as it allows engineers and technical experts to visualize, in real time, the problems faced by line personnel, and to share instructions and technical information with them to facilitate their resolution.

Thanks to these technologies, the Nueva Pescanova Group offers its workers the possibility of **performing technical assistance services for the production equipment in a more efficient way, by means of real-time calls, as well as the possibility of contributing to reduce costs and increasing their productivity and efficiency in problem solving.**

To summarize, and thanks to the combined implementation of HoloLens 2 and Remote Assist, frontline workers can:

Share critical information, in real time, from anywhere in the world.

Attach videos, manuals, images and annotations to a Teams call; optimizing the speed and quality of remote collaboration.

Exploit all these communications with the Microsoft Teams tool.

Place virtually in real space documents, images, diagrams that represent a qualitative leap for operability and productivity.

About the Nueva Pescanova Group.

The Nueva Pescanova Group is a Spanish company leader in the market, specialized in the fishing, farming, processing and commercialization of fresh, chilled and frozen seafood products.

We provide solutions to your challenges:
